**NUEVAS TENDENCIAS EN EL FITNESS:
MATERIALES PEQUEÑOS**

Vibration & Balance

ALEX MARTÍN
Fisioterapeuta

Sevilla
18 y 19 de septiembre de 2008

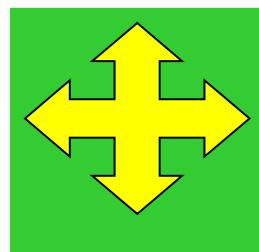

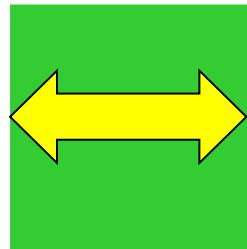

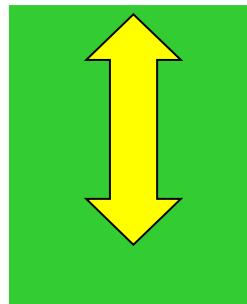

Vibration & Balance

**Sr. Alejandro Martín
Fisioterapeuta de RFEC**

**Especialidad en Actividad Física y Deportiva (TAFAD)
Director de Centro de Rehabilitación FisioKines (Barcelona)**

"BALANCE AND
VIBRATION
IN ONE"

Los efectos positivos del entrenamiento de vibración están clínicamente probados por numerosos estudios.

"BALANCE AND
VIBRATION
IN ONE"

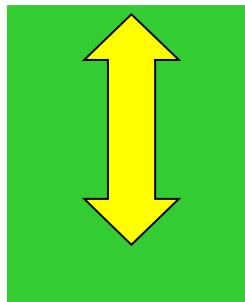

Balance Training

- **Purpose** – Efficiency of a home based balance training program on a balance plate to increase the static as well as the dynamic balance in order to prevent sport related injuries
- **Material** - 127 sporting individuals (66 balance training, 61 control group) 14-19 years of age
- **Method** – 6w 1 time/day, remaining 6 months 1 time/week
- **Result** – Increase of static balance 20,7 sec, dynamic 2,3 sec, 12 injuries (2 in training group, 10 i control group)
- **Conclusion** – Training on a balance board increases the static as well as the dynamic balance and decreases the risk for sport traumas

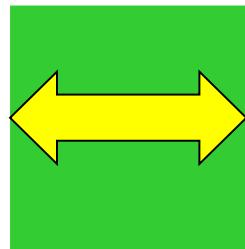

[Carolyn A et al. *Effectiveness of a home-based balance-training program in reducing sports related injuries among healthy adolescents: a cluster randomized controlled trial.* CMA Media Inc 2005;172 (6)]

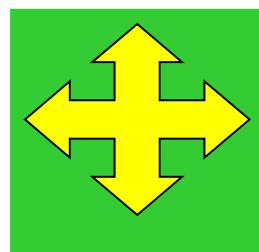

"BALANCE AND
VIBRATION
IN ONE"

Los efectos positivos del entrenamiento de vibración están clínicamente probados por numerosos estudios.

El entrenamiento de la estabilidad hace muchos años que se utiliza y su efectos positivos están ampliamente documentados

"BALANCE AND
VIBRATION
IN ONE"

Muscle strength

Torvinen et al 2002, could in his research about WBV (Whole Body Vibration) show a significant improvement regarding jumping height, leg extension strength and balance 2 minutes after the vibration training. The effects had returned to normal values after one hour. The vibration training was done using a frequency of 15-30Hz and 10 mm amplitude

[Torvinen et al. Effect of a vibration exposure on muscular performance and body balance. Randomized cross-over study. Clin Physiol & Func Im 2002;22:145-152]

"BALANCE AND
VIBRATION
IN ONE"

Muscle Strength

- **Purpose** – Compare the effects of conventional strength training to WBV
- **Material** - 67 untrained women, older than 21 years
- **Method** – WBV ($n=18$) 3-20 min 35-40Hz, 2,5-5 mm amp, conventional training ($n=18$) 1h, placebo 0,4 mm amp ($n=19$), control group ($n=12$), 12w (3 times/w)
- **Result** – Increased muscle strength and increased elasticity for the WBV group
- **Conclusion** – WBV is a potential method of training for untrained women, as well as the conventional training

[Delecluse C et al. *Strength Increase after Whole- Body Vibration Compared with Resistance Training. Med & Scien in Sports & Exc 2003; 1033-1041*]

"BALANCE AND
VIBRATION
IN ONE"

Circulation

Kerschan-Schindl et al proved 2001 that the circulation measured with m. gastrocnemius and m. quadriceps was significantly increased using WBV (26Hz, 3 mm amp). Increased blood throughout by an increased number of capillaries with at least 2 mm diameter and arterial vasodilation.

[*Kerschan-Schindl et al. Whole-body vibration exercise leads to alternations in muscle blood volume. Clin Physiol 2001;21 (3): 377-382*]

"BALANCE AND
VIBRATION
IN ONE"

Postural control

- Increased postural activity by WBV and by leg vibration
- Increased proprioceptive inflow
- Increased signal flow - VIPI (Vibrations Induced Postural Illusion)
- 30 min
- 18,5Hz

[Martin BJ et al. Effects of whole-body vibrations on standing posture in man. Aviation, Space and Environmental Medicine 1980;51 (8):778-787]

"BALANCE AND
VIBRATION
IN ONE"

Osteoporosis

- **Purpose**- Investigate the effects of WBV
- **Material** - 70 women in menopause, 58-74 years
- **Method** – WBV (n=25) 30 min 35-40Hz, 1,7-2,5mm amp, strength training (n=22) 1h, no training at all (n=23) 3 times/w i 6 months.
- **Tests** – BMD (bone mass density), strength test, balance etc.
- **Result** – BMD in prox femur increased by WBV, not by conventional strength training, musculoskeletal swing decreased in two of the exercises for the WBV group
- **Conclusion** – WBV might be an effective and suitable method to prevent case injuries and fractures for elderly women. More studies are required,

[Verschueren S et al. *Effect of 6-month Whole Body Vibration Traning on Hip Density, Muscle Strenght, and postural control in Postmenopausal Women: A randomized controlled pilot study.* Amer Soc for Bone & Mineral Res 2004;352-359]

"BALANCE AND
VIBRATION
IN ONE"

Hydrocortisone and serotonin

- Decreased level of hydrocortisone in plasma after 10 minutes WBV

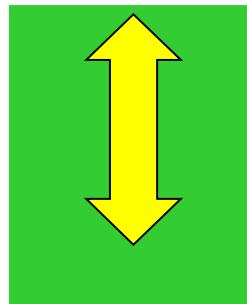

[Bosco C et al. Hormonal responses to whole-body vibration in men. Eur J: Appl Physiol 2000;81 (6) 449-454]

- Increased levels of serotonin i CNS (Central Nervous System) – animal study

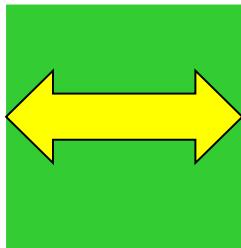

[Ariizumi M et al. Effect of whole body vibration on the rat brain content of serotonin and plasma corticosterone. Eur J: Appl Physiol 19 1983 15-19]

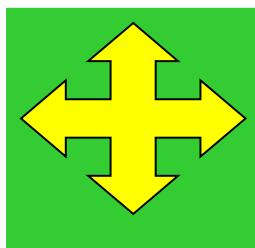

"BALANCE AND
VIBRATION
IN ONE"

Los efectos positivos del entrenamiento de vibración están clínicamente probados por numerosos estudios.

El entrenamiento de la estabilidad hace muchos años que se utiliza y su efectos positivos están ampliamente documentados

Combinar el entrenamiento de vibración y estabilidad proporciona el doble de beneficios

"BALANCE AND
VIBRATION

Osteoarthritis in the knee

Parker Institute, Inst. For sports science, Denmark
Master thesis, March 2007

Objective:

- Assess effect of WBV on pain, functional capacity and quality of life

Setup:

- Single blinded, randomised controlled clinical trial, 52 female patients. Three groups: stable vibration platform, Vibrosphere®, control group
- 8 wks, twice a week, 3-12 minutes

Results:

- Vibrosphere® positive MCS (Mental Component)Score, balance and proprioceptive acuity
- Stable vibration: Muscular performance and proprioceptive acuity

Conclusion:

- WBV is time-saving, effective, and safe method for knee-OA

Pain reduction chronic acchilles tendinopathy patients

Bispebjergs Hospital, Inst. of sports Medicine, Denmark
Bachelor thesis June 2007

Objective:

- Examine the effect on pain reduction and rehabilitation of Vibrosphere® training versus eccentric training

Setup:

- 2 active women and 14 active men, 8 persons in each group. Three times Vibrosphere® training each week, eccentric group home training twice a week for fours weeks

Results:

- 4 wks Vibrosphere® training significant reduction of VAS in rest and after toe-raise test. Eccentric training shows no significant improvement.

Conclusion:

- Vibrosphere® training for patients with chronic acchilles tendinopathy gives a greater pain reduction than eccentric training

Pain relief patients with chronic neck pain

Karolinska Institutet, Div. of Physiotherapy
Master thesis, Autumn 2006

Objective:

- To investigate if training on Vibrosphere® could give patients with chronic neck pain pain relief

Setup:

- 29 patients with chronic neck pain randomised in two groups, an experimental group and a control group. Vibration group stood on Vibrosphere® 3 times 30 sec. 35 Hz and lay on the Vibrosphere® 3 times 30 sec 35 Hz. Control group did the same exercises without vibrations.

Results:

- All in the Vibrosphere® stated a decrease in pain measured on the VAS-scale (from 56,5 to 25,5) and with Painmatcher from 7,5 to 5,5. Balance improvement enhanced for 15 persons in Vibrosphere® group. No pain relief for control group.

Conclusion:

- Training on Vibrosphere® gives patients with chronic neck pain an immediate pain relief and improved ability to balance.

Clinical trial: Continence training

Day care centre Husie, Malmö, Sweden
Clinical trial, Autumn 2007

Objective:

- To investigate if training on the Vibrosphere® could shorten the time required to get positive results for female patients with strain incontinence.

Setup:

- 8 patients trained for 2 months. The patients initially answered a survey regarding their use of napkins, number of times they had to go to the toilet in the night etc. The patients combined home based exercises with training on the Vibrosphere® three times a week, sitting on the Vibrosphere® 3 times 45 sec 30 Hz and doing pinch exercises. After two months, the initial survey was answered again.

Results:

- 6 out of the 8 persons showed a significant improvement and got rid of most of their strain incontinence. The consumption of napkins went down to half, number of nightly visits to the toilets went down to zero or was considerably lowered. Generally, the patients experienced an improvement in quality of life and more freedom to move.

Conclusion:

- Continence training on Vibrosphere® might be an effective method to rehabilitate strain incontinence.

"BALANCE AND
VIBRATION
IN ONE"

La Estabilidad Física

- La estabilidad y el control postural es un prerequisito para la movilidad y función humana
- El equilibrio es crucial para evitar lesiones post-esfuerzo
- La mayoría de lesiones disminuyen el nivel de estabilidad global
- Más edad menos estabilidad física
- El que más y el que menos necesita mejorar la estabilidad

Propriocepción

- Propriocepción: del latín *proprius*, hace referencia a "a uno mismo" y percepción a la posición relativa de las diferentes partes del cuerpo.
- Proprioceptores son receptores que revelan información sobre la posición del cuerpo en el espacio, la actividad muscular, calidad y aceleración de los movimientos, posibles peligros, facilita el aprendizaje motor...

"BALANCE AND
VIBRATION
IN ONE"

¿Son las vibraciones un fenómeno natural?

Sí, cada día estamos expuestos a vibraciones: conduciendo el coche, viajando en tren, en barco, avión, ascensores, usando maquinarias...

¿Son las vibraciones siempre positivas?

No, pueden producir daños en los materiales y tejidos: terremotos, grietas en edificios (metro), lesiones musculares...

"BALANCE AND
VIBRATION
IN ONE"

La clave

Conseguir activar el sistema de propicepción con:

- Mínimo impacto en tejidos, articulaciones, órganos internos
- Máximos resultados físicos y psicológicos
- Reduciendo sensaciones desagradables
- Mínimos daños secundarios: ruido, transmisión de la vibración

"BALANCE AND
VIBRATION
IN ONE"

Pasado, presente y futuro

- Plataformas de vibración:
 - Vibración vertical o axial
 - Vibración basculante
- Esferas de vibración
 - Balance & Vibration Training

Balance & Vibration training

Onda producida por movimientos mecánicos repetidos combinado con trabajo activo de propicepción mediante ejercicios estáticos o dinámicos. Parámetros:

- Aceleración $a=A*(2\pi f)^2$
- Amplitud 2-4 mm

"BALANCE AND
VIBRATION
IN ONE"

Aceleración

- La gravedad de la tierra – aceleración de $9,82 \text{ m/s}^2 = 1g$
- Caminar = 1-1,5g
- Correr = 2-3g
- Saltar = 3-8g
- Vibración = 3-15g
